

fantasy_teams.py
add_team_to_fantasy_league
line 262

With proper concurrency control, the second transaction (add_team_to_fantasy_league) should wait for the first transaction to be completed, and see that the team value is now \$1,100,000, and fail the check for if the team value <= the league budget (\$1,000,000). The player would be added to the team, and therefore, the team would not be added to the league.
